

BioTroop BT-200

Biological treatment agent
for industry purposes

Purpose of use

BioTroop BT-200 is a multipurpose biological treatment agent containing selected Bacillus bacteria. The product is used for the treatment of oily and greasy waste as well as various industrial and non-toxic waste. Increases bacterial growth, improving the stability of the biological system, removing odors and promoting the stability of the wastewater treatment system. BT-200 enhances the operation of the biological system after maintenance breaks, being suitable for the treatment of wastewater and solid waste.

Properties

Brown powder

Contents

Please see separate Safety Data Sheet for ingredient details.

Instructions for use

BT-200 can be added directly to the waste water stream or to an aerated basin. For potentially toxic wastes or short residence times, rehydration is recommended 30-90 minutes prior to addition to the waste system, using 9 liters of water per 500 grams of BT-200.

For best results, the water temperature should be between 21°C and 31°C.
