

# BIOTROOP XPRS PLUS

## BIOLOGICAL BOOSTER AND ODOR REMOVER

A highly active natural microbial additive for the start-up and maintenance of biological wastewater treatment plants, ship wastewater systems and purification equipment. Ensures system operation by effectively reducing BOD load and sludge volume. Improves equipment operating efficiency and reduces odors in wastewater tanks. Bacterial strains work effectively in a wide range of pH and temperature environments. Bacterial strains are resistant to chlorine up to 20 ppm. The chlorine neutralizing component in the product provides additional protection up to 100 ppm. Microbes are also effective in low oxygen conditions. Contains free enzymes that stimulate bacteria. Eliminates and capsulates odors with immediate effect.

### Contents

Marble white powder contains bacteria that have been specifically selected to break down organic substances found in wastewater waste for optimal efficiency.

### Instructions for use

MSDs are estimated per person (PE) to achieve satisfactory performance. BioTroop XPRS is designed based on an average daily caloric intake of 3000 kcal/person. The dosage is adjusted according to the application profile. For example, for a population of 25 people:

- Start-up: 2-5 x 100g per 1m<sup>3</sup>/day for 3 days.
  - Maintenance: 1 x 100g per 1m<sup>3</sup>/day depending on the load and the flowing BOD.
- Recovery failure/toxic shock 5 x 100g per 1m<sup>3</sup>/day as needed.

Dose bags can be added directly to tl
